

INPA Coin

(International Non-Fungible Permanent Asset)

INPA Coin

(International Non-Fungible permanent asset)

is an Autonomous yield and Liquidity generation protocol. Every time someone buys INPA Coin, the total supply goes down and the Holders get rewarded. Every transaction also creates liquidity, which is automatically LOCKED.

INPA Coin (INPA) Protocol

INPA Coin (INPA) Protocol works, Buy and Hold INPA Coin in your wallet and you will get rewards automatically from every transaction in term of burn and add liquidity. No need to farm, stake or fill out claim forms. INPA Coin works by taking a 5% fee on every transaction. This is divided into two parts BURN and ADD LIQUIDITY.

The Burn is a 2.5% transaction fee, The more INPA Coin you hold, the more rewards you will receive. The “DEAD” (Burn) wallet, receives the most percentage to burn. The second part is LP GENERATION, which is often referred to as Liquidity. This part gets 2.5 % transaction fee and deposited back into the liquidity pool, which is also LOCKED FOR 5 YEARS (2026).

The total supply is 50,000 Coins only and Burn fee will Ratio will be stop on 37,700 Coin. More Lesser Supply, more Rise in price and more stability.

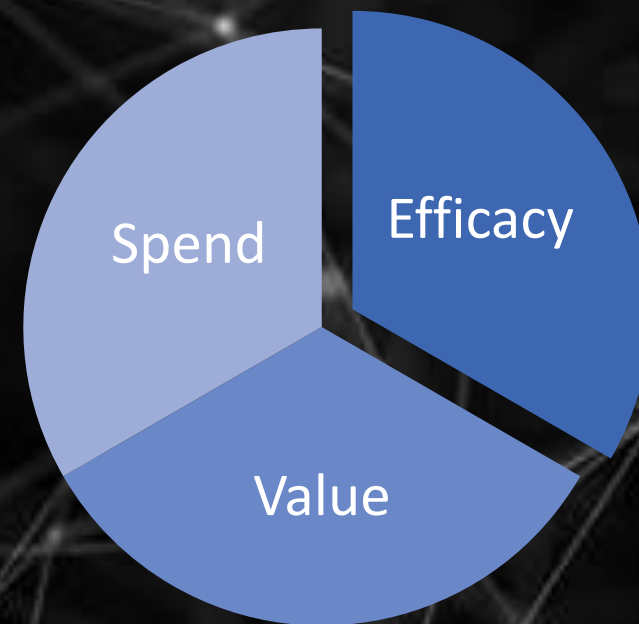

Tokenomics Metrics

Token Name:	INPA Coin
Token Symbol:	INPA
Total Supply:	50,000
After Burn:	37,700

Total Burn : 25%
